T.S PAVAN PRASAD

Forward Deployed Engineer | AI Orchestration | Solutions Engineering | Builder

Bengaluru | pavanprasad.1999@gmail.com | **PORTFOLIO** | linkedin.com/in/pavan-prasad-210039130 | +91 9535135425

Summary

Forward Deployed Engineer with 4+ years in customer-facing engineering across regulated industries. At Moxo, an AI-powered business orchestration platform, I work embedded with enterprise customers to take deployments from requirements to production, and I ship code to the core product: customer-driven fixes as well as roadmap features. Background spans application security, embedded systems, and human-in-the-loop AI workflow design, with a builder mindset: I ship live products alongside the day job. Comfortable owning the full arc from technical discovery to production as a trusted advisor to engineering and business stakeholders.

I don't just demo systems. I build and ship ones that hold up in production.

WORK EXPERIENCE

MOXO | AI Orchestration Platform **Bengaluru**

Forward Deployed Engineer **June 2026-Present**

- Own technical delivery for enterprise deployments of Moxo's AI orchestration platform, turning multi-party business processes into production flows that combine human approvals, AI agents, and system actions.
- Ship production code to the Moxo codebase based on customer requirements: bug fixes, plus product enhancements aligned with the product roadmap, taking changes from scoping through code review and release.
- Generalize customer-specific builds into reusable platform capabilities, so features developed for one deployment become part of the core product.
- Engineer integrations between Moxo and customers' systems of record (CRMs, ERPs, document systems) using REST APIs, webhooks, and automation tooling, keeping data and actions inside one governed flow.
- Configure AI agents that prepare, validate, and route work around human decisions, preserving the audit trails and governance controls regulated customers require.
- Act as the technical owner for customer engineering and operations teams: debugging production issues, running root-cause analysis, and feeding field insights back to Product and Engineering.

Solution Engineer **June 2025-May 2026**

- Designed and deployed workflow automation systems for enterprise customers, aligning solutions with compliance, governance, and operational requirements across industries.
- Built and launched an intent-driven automation bot using API orchestration (n8n, Zapier, Make), reducing manual routing effort and handling a significant share of repetitive client queries autonomously.
- Architected a governed document processing workflow where automated systems prepare structured outputs and human agents retain approval control, reducing document turnaround time while maintaining full auditability.
- Led end-to-end deal cycles including technical discovery, solution design, demos, POCs, onboarding, and customer enablement — directly influencing deal progression and customer adoption.
- Guided enterprise customers through automation adoption by explaining system behavior, limitations, and governance considerations (data privacy, trust, compliance).
- Partnered with Sales, Product, and Engineering to deliver scalable solutions; translated customer feedback into actionable product insights influencing roadmap priorities.

LEXINGTONSOFT | **Application Security & Software Quality** **Bengaluru**

Solution Engineer **Sept 2022-May 2025**

- Managed a ~$400K book of business across enterprise and mid-market accounts, covering pre-sales and post-sales in healthcare, automotive, aerospace, embedded systems, and government sectors, operating in highly regulated environments with strict compliance requirements.
- Led technical evaluations, demos, and POCs for application security solutions (SAST, DAST, SCA, fuzzing), improving conversion from evaluation to adoption by clearly articulating ROI and risk mitigation.
- Supported deployment of automated ECU security testing solutions (HydraVision, HydraScope), enabling OEM engineering teams to understand protocol-level behavior and integrate testing workflows.
- Advised customers on security architecture, deployment models, and compliance frameworks (ISO 26262, IEC 62443, MISRA) - built credibility as a trusted technical advisor, not just a sales resource.
- Delivered workshops and enablement sessions for technical and executive audiences, and fed structured field feedback into product strategy and feature prioritisation.

PROJECTS & BUILDER WORK

Portfolio: aimforthehead.github.io/pavanprasad

Argonaut - Sprint Management for Hardware Teams (**Live**)

- Capacity-aware sprint planning tool for hardware teams with real-time collaboration and leave-aware planning, in active use at a live EV startup. Stack: React, Supabase, Zustand, WebSockets, PWA

Enterprise Workflow Automation (**Production - Moxo Platform**)

- Intent-driven bot with contextual routing and human escalation, plus a document workflow where AI prepares outputs and humans approve them, with full audit trails. Stack: n8n, Zapier, LLM APIs, Webhooks

Hoomanly - Anonymous Social Platform (**Live**)

- Privacy-first anonymous social platform with trust-based moderation and optional AI companionship during low-availability periods. Stack: Real-time DB, LLM APIs

Lucid3D - Heritage Reconstruction & Physical Systems (**Live**)

- Photogrammetry pipeline that reconstructs heritage structures from sparse images, extended to 3D-printed display models for restaurants. Stack: Photogrammetry, WebGL, 3D Printing

EDUCATION

Cambridge Institute of Technology **Bengaluru**

B.Tech - Electrical and Electronics Engineering - 7.0 CGPA **2017-2021**

SKILLS

AI & Integration: LLM/API Integration, Prompt Engineering, Human-in-the-Loop Systems, Agentic Workflows, AI Governance, n8n, Zapier, Make, Webhook & REST API Orchestration

Forward Deployed & Solutions Engineering: Production Code Contributions, Customer-Driven Feature Development, Systems Integration, Pre-Sales Cycles, Technical Discovery, POC Design, Demo Engineering, Solution Architecture, Customer Enablement

Programming: Python, JavaScript, React, Shell Scripting, C/C++, Git

Cloud & Infrastructure: Azure, AWS, GCP, Docker, Kubernetes, CI/CD

Security & Compliance: Application Security, IoT Security, SAST, DAST, SCA, Fuzzing, ISO 26262, IEC 62443

Core Strengths: Technical Storytelling, Executive Communication, Systems Thinking, Cross-functional Collaboration
